Lesson 04 Demo 13

Designing User Interfaces with Generative AI

Objective: To create an engaging e-commerce product page through intuitive user interface design using Uizard, a generative AI platform
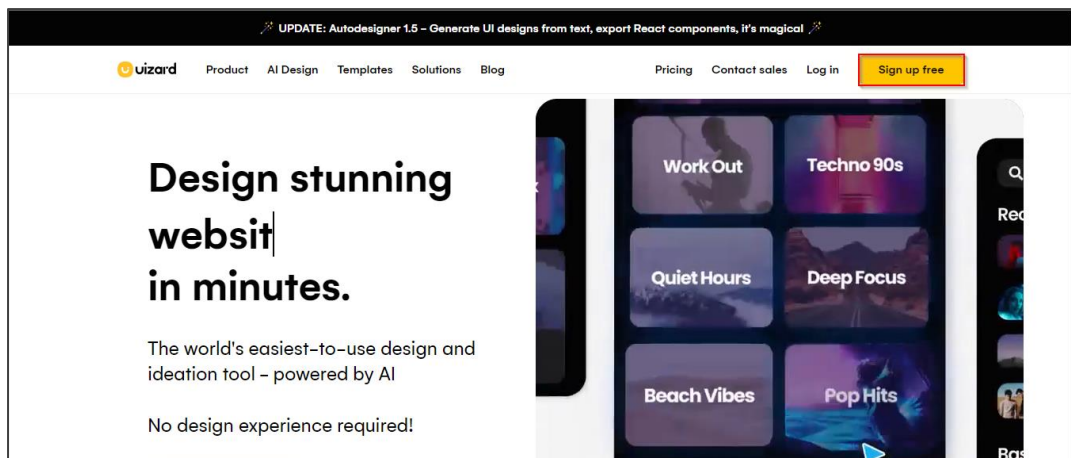

Tools required: uizard.io

Prerequisites: Basic knowledge of programming languages
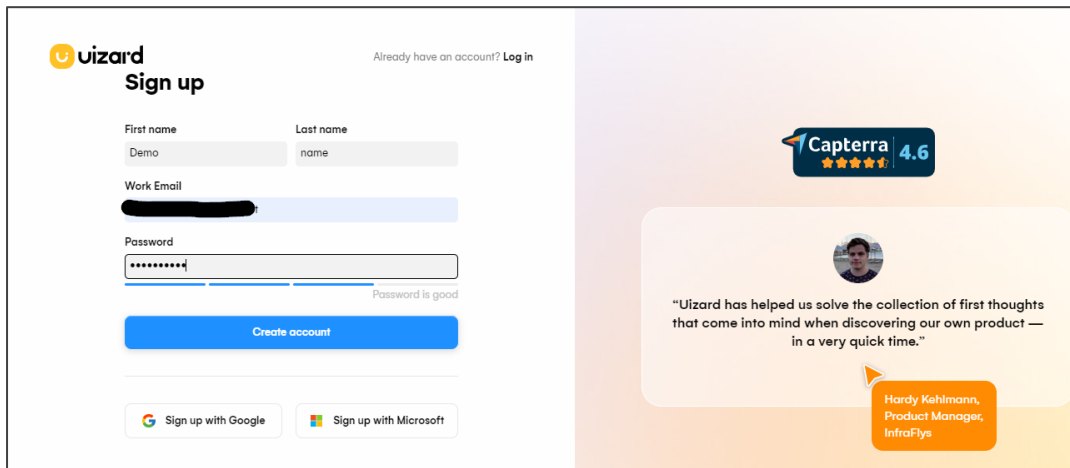

Steps to be followed:

1. Create a user interface for the product page

Step 1: Create a user interface for the product page

1.1 Navigate to the website **https://uizard.io/** and click **Sign up free** to create a designing account

1.2 Enter your **First name**, **Last name**, **Work Email**, and **Password**. Now, click **Create account.**

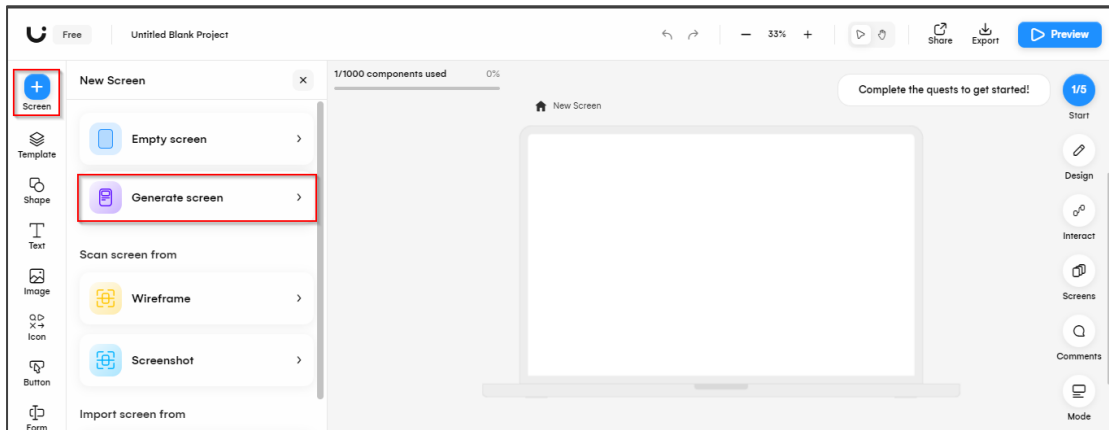

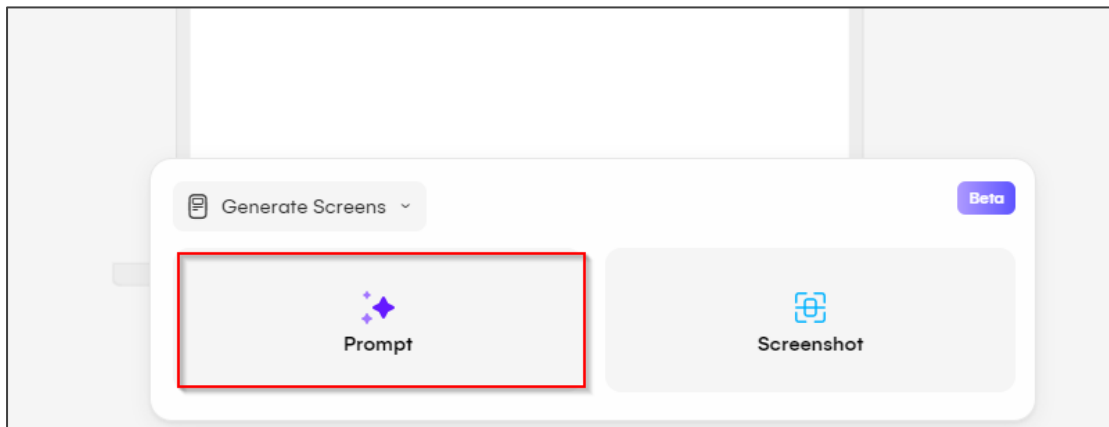

1.3 Select **New blank project**, and click on **Web** to create a new blank project
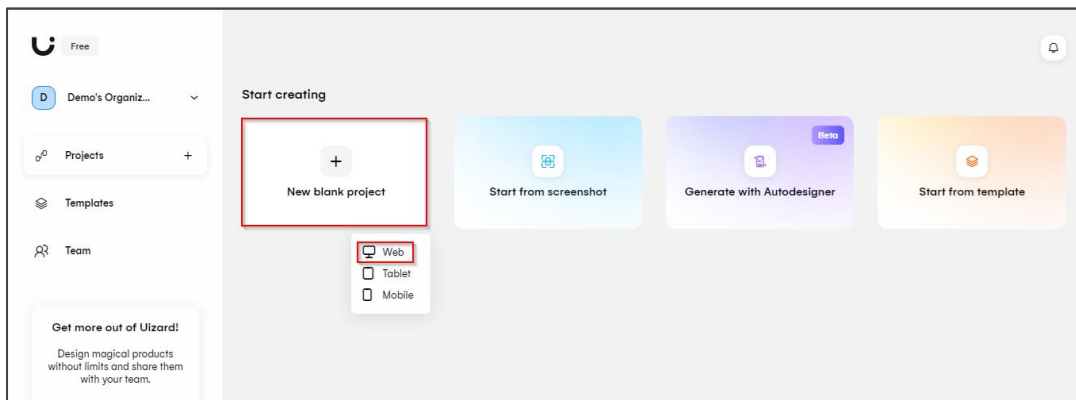

1.4 Click on **Screen**, and click **Generate screen** to get a new home screen to design the project

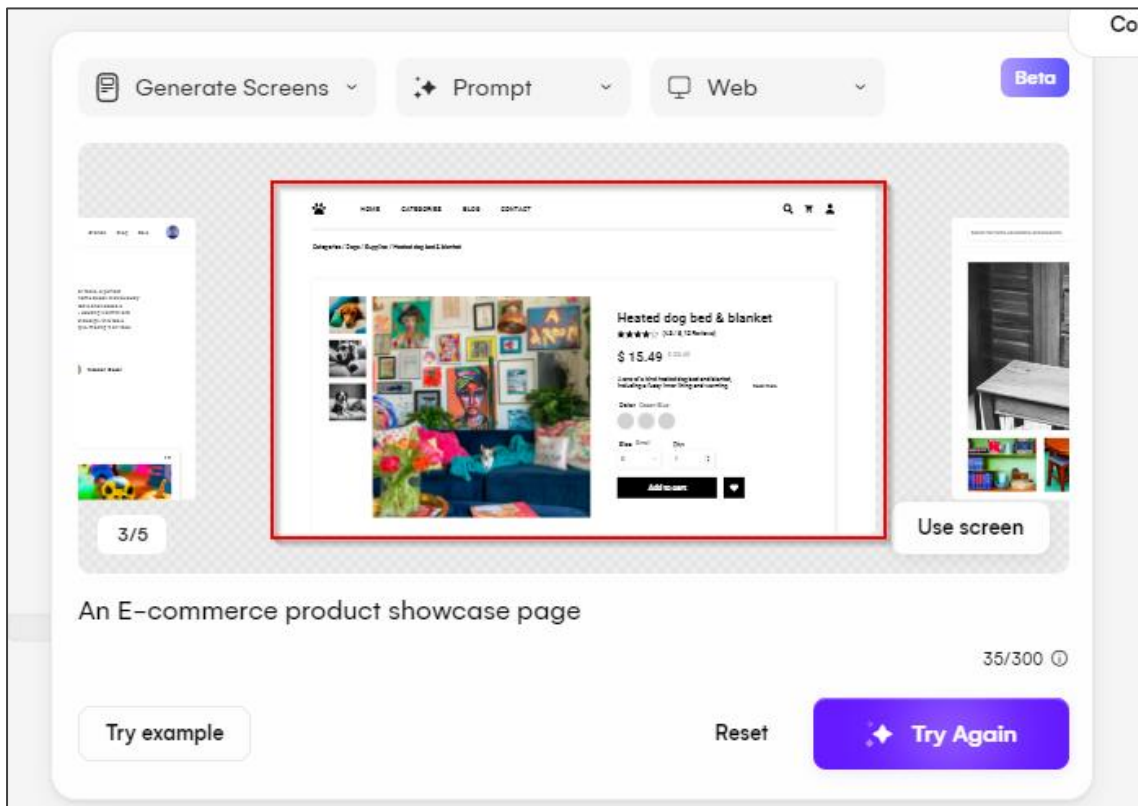

1.5 Click **Prompt** to generate a prompt

1.6 Use the following prompt to create an e-commerce product page:
 **An E-commerce product showcase page**

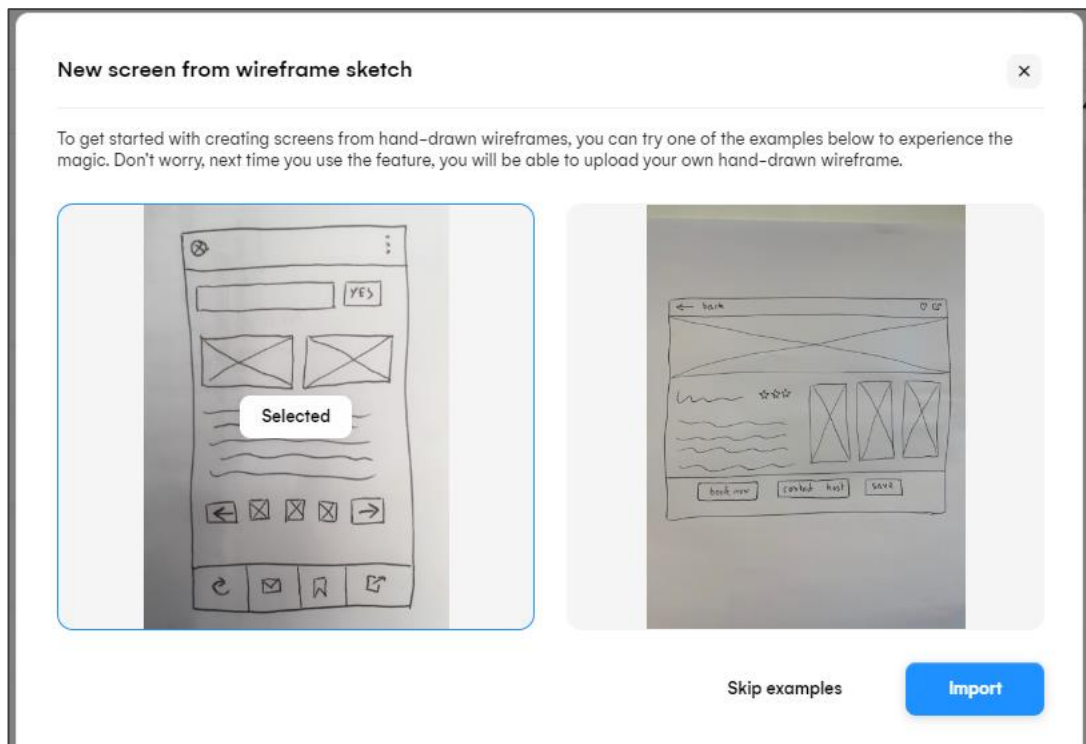

1.7 Select any page and click on it

1.8 The AI-generated page is successfully created. You can click on **Share**, **Export**, or **Preview** from the tab as shown below:

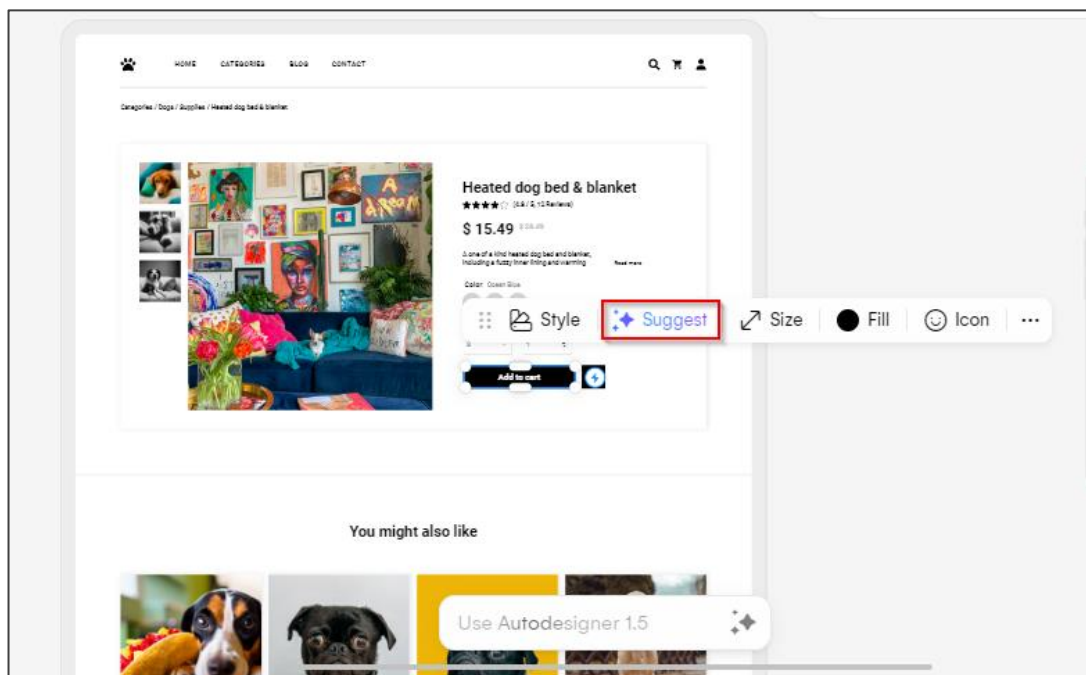

1.9 Click **Screen**, and click on **Wireframe** to upload hand-drawn sketches
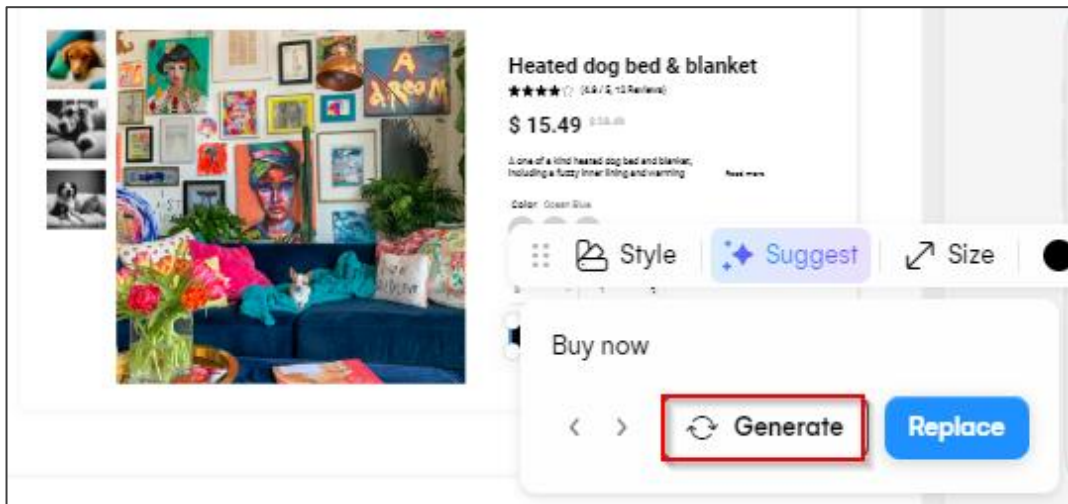

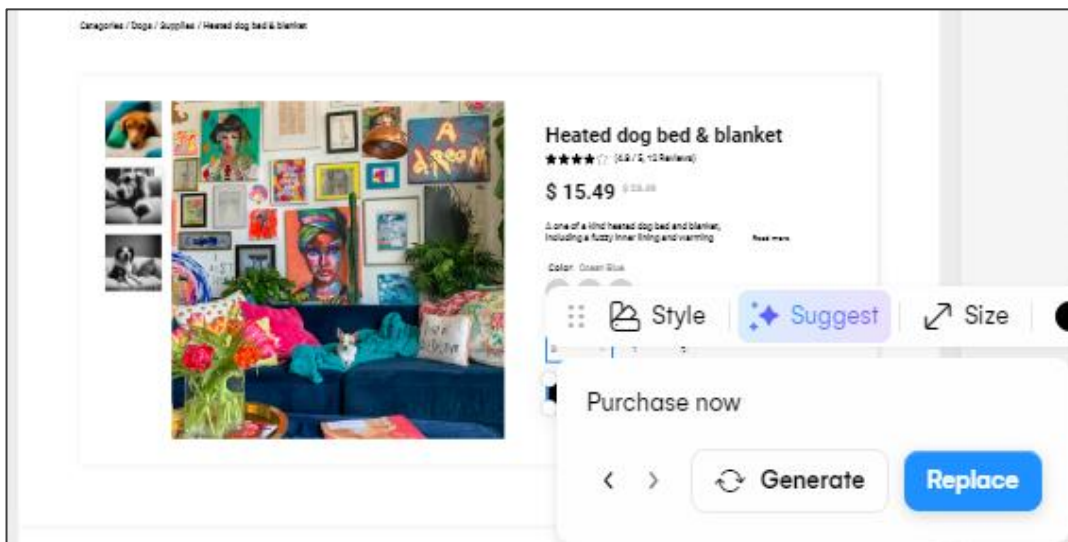

1.10 Click **Import**

1.11 Click **Add to cart**, and click on **Suggest** to get design change suggestions

1.12 Click on the **Generate** button

1.13 Select any suggested change and click on the **Replace** button

By following these steps, you have successfully created an e-commerce product showcase page using Generative AI.
